

Environmental Policy

MPI Engineered Technologies is a leading metal forming supplier, dedicated to delivering innovative products, quality, technology, and tailored solutions to our customers. We are committed to developing, implementing, and maintaining an Environmental Management System compliant with the International Standard ISO 14001, and to establishing impactful environmental objectives. MPI leadership is dedicated to:

- Continual improvement of the Environmental Management System to enhance environmental performance through employee involvement and data-driven decisions.
- Protection of the environment, including pollution and waste prevention, while maximizing reuse and recycling.
- Compliance with all applicable federal, state, and local regulations.
- Actively seeking input from all relevant stakeholders and considering their needs.

As part of MPI's environmental policy, potential environmental impacts are assessed for all new and existing customer opportunities, process changes, and changes in operating equipment. This evaluation includes documenting potential impacts on climate change as part of our change management process.

MPI considers the emissions of greenhouse gases that contribute to climate change.
